

Embedding a Dyyno Player

The Dyyno embeddable flash player lets you embed a player on any website that streams live, scheduled replay, or on-demand videos on your channel.

Three different player types

There are several player types you can embed:

1. **Channel player** – This is a flash player that plays the first video in your channel. If you have a live video, this will start to play. If there is no live video, the first scheduled video will start to play. If there is no scheduled video, the first on-demand video will start to play. If you have no videos in your channel, then only a black screen will be shown.
2. **The Stream Player** – This is a flash player that plays a specific live or scheduled replay stream. If there are no live or scheduled replay streams, only a black screen will be shown.
3. **The VOD player** – This is a flash player that plays specific on-demand videos. If you have not uploaded and published any on-demand videos, the player will show a black screen.

Embedding a player

If you would like to embed a specific player to your website, please follow these instructions:

1. **Channel Player** – *embeds the first video in your channel*

A. **Copy and paste the embed code to a text editor**

```
<iframe src="http://www.dyyno.com/player/?channel=[CHANNEL NAME"
width="[VIDEO WIDTH]" height="[VIDEO HEIGHT]" scrolling="no"
frameborder="0"></iframe>
```

B. **Edit the embed code.** Make the following edits to stream the first video in your channel:

1. Replace [channel name] with the name of your channel. E.g. If your channel name is dyynotv, you will use “dyynotv” instead of “[channel name].”
2. Replace [video width] and [video height] with the desired width and height of your video. E.g. if your video is 640 x 480 resolution, replace” [width]” with “640” and “[height]” with “480.”

Your final code should look something like this:

```
<iframe src="http://www.dyyno.com/player/?channel=games"
width="960" height="320" scrolling="no" frameborder="0"></iframe>
```

C. Add the embeddable player code to your HTML code

Simply copy and paste the embeddable player code to the desired location in your HTML code. Once published, you will see the player appear with the first video on your channel playing.

2. Stream Player – embed a specific live or scheduled replay stream

A. Copy and paste the embed code to a text editor

```
<iframe src="http://www.dyyno.com/player/?channel=[CHANNEL
NAME]&sid=[SID]" width="[VIDEO WIDTH]" height="[VIDEO HEIGHT]"
scrolling="no" frameborder="0"></iframe>
```

B. Edit the embed code. Make the following edits to stream live and scheduled replay videos from your channel:

1. Replace [channel name] with the name of your channel. E.g. If your channel name is dyynotv, you will use “dyynotv” instead of “[channel name].”
2. Replace [SID] with the videos’ session ID (SID). To find the SID, go to your channel page and play the live or scheduled replay video you’d like to embed. You will see the stream url appear in the browser window’s address bar (e.g. <http://www.dyyno.com/player/?channel=games&sid=18DF4B9DC28A5485>). Replace “[SID]” with the string of characters after the “&sid” field in the url (e.g. “18DF4B9DC28A5485”)
3. Replace [video width] and [video height] with the desired width and height of your video. E.g. if your video is 640 x 480 resolution, replace “[width]” with “640” and “[height]” with “480.”

Your final code should look something like this:

```
<iframe
src="http://www.dyyno.com/player/?channel=raj&sid=A63C121D671AB
C9B" width="960" height="320" scrolling="no"
frameborder="0"></iframe>
```

C. Add the embeddable player code to your HTML code

Simply copy and paste the embeddable player code to the desired location in your HTML code. Once published, you will see the player appear with the specific live or scheduled replay stream.

3. VOD Player – embed a specific video on-demand stream

To embed the VOD player, you will need to do several simple steps:

A. Copy and paste the embed code to a text editor

```
<iframe src="http://www.dyyno.com/player/?channel=[CHANNEL  
NAME]&vod=[VOD ID]" width="[VIDEO WIDTH]" height="[VIDEO HEIGHT]"  
scrolling="no" frameborder="0"></iframe>
```

B. Edit the embed code. Make the following edits to stream live and scheduled replay videos from your channel:

1. Replace [channel name] with the name of your channel. E.g. If your channel name is dyynotv, you will use “dyynotv” instead of “[channel name].”
2. Replace VOD ID with the on-demand video’s ID . To find the ID, go to your channel page and play the on-demand video you’d like to embed. You will see the stream url appear in the browser window’s address bar (e.g. <http://www.dyyno.com/player/?channel=games&vod=1567>). Replace the “VOD ID” field with the string of characters after the “&vod” field in the url (e.g. “11567”).
3. Replace [video width] and [video height] with the desired width and height of your video. E.g. if your video is 640 x 480 resolution, replace “[width]” with “640” and “[height]” with “480.”

Your final code should look something like this:

```
<iframe src="http://www.dyyno.com/player/?channel=dennis&vod=1163"  
width="960" height="320" scrolling="no" frameborder="0"></iframe>
```

C. Add the embeddable player code to your HTML code

Simply copy and paste the embeddable player code to the desired location in your HTML code. Once published, you will see the player appear with the specific on-demand video .
